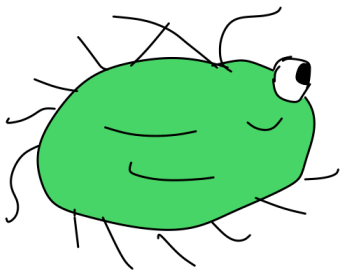
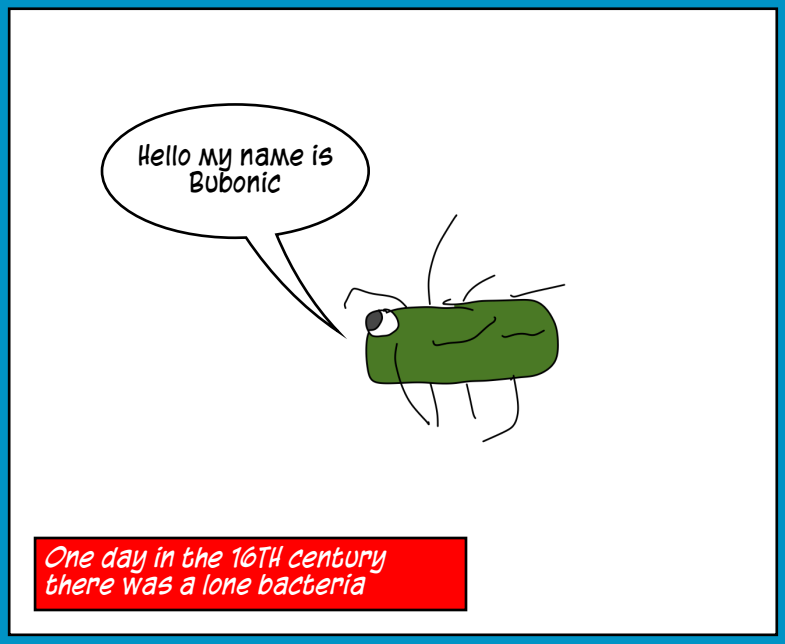
Bubonic

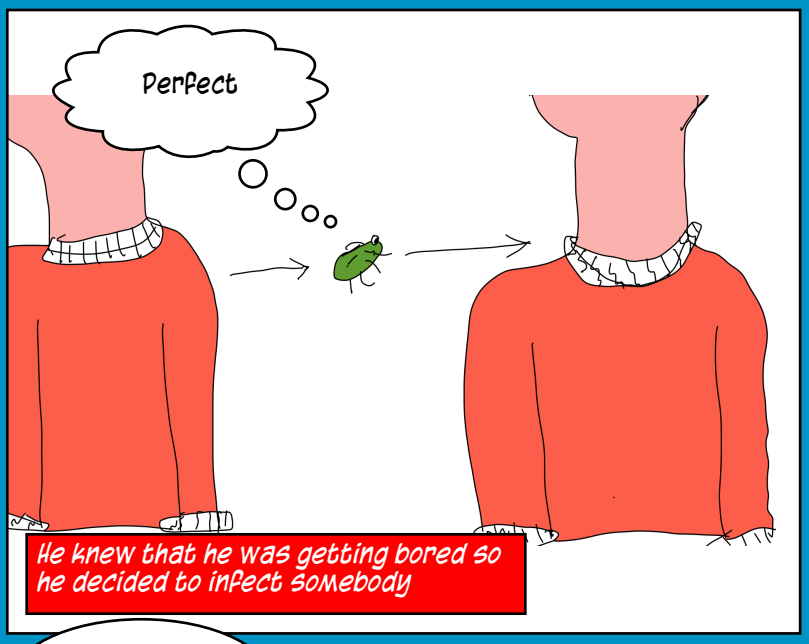
By: Ben T



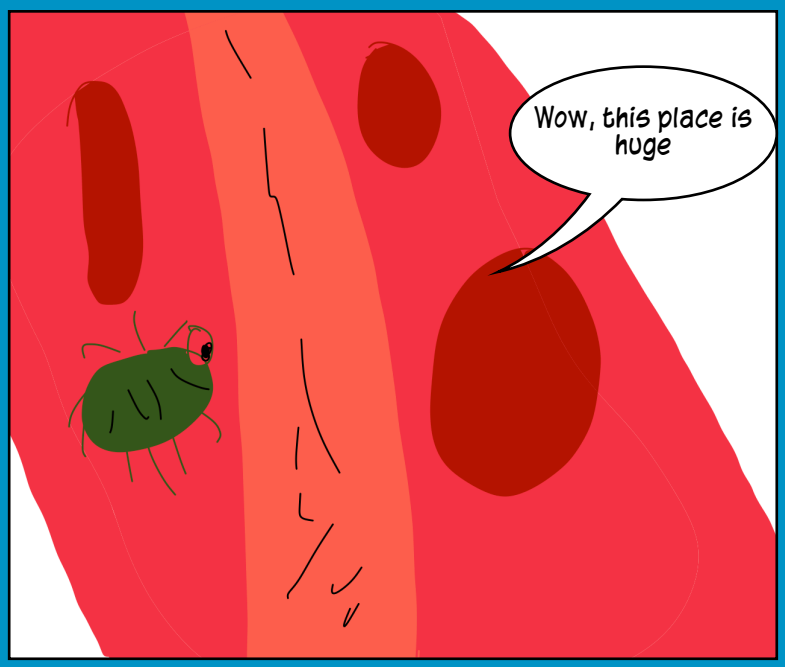
APPROVED BY THE COMIC LIFE AUTHORITY



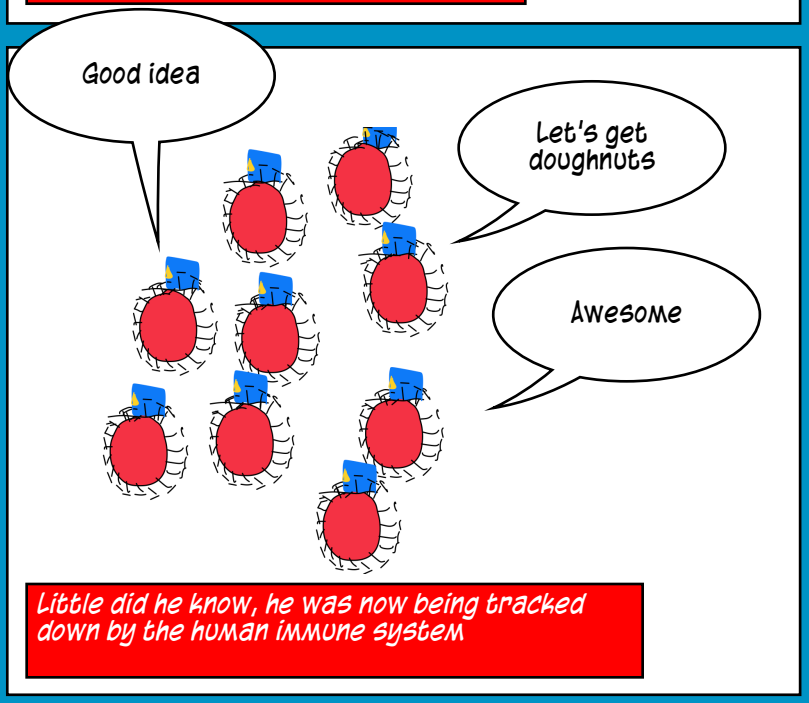
Hello my name is Bubonic
One day in the 16TH century there was a lone bacteria



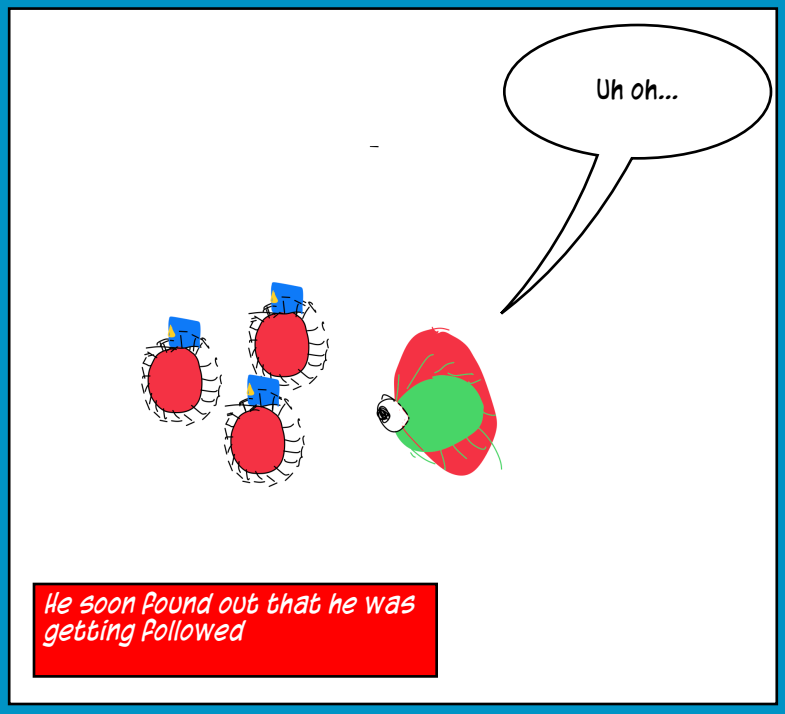
Perfect
He knew that he was getting bored so he decided to infect somebody



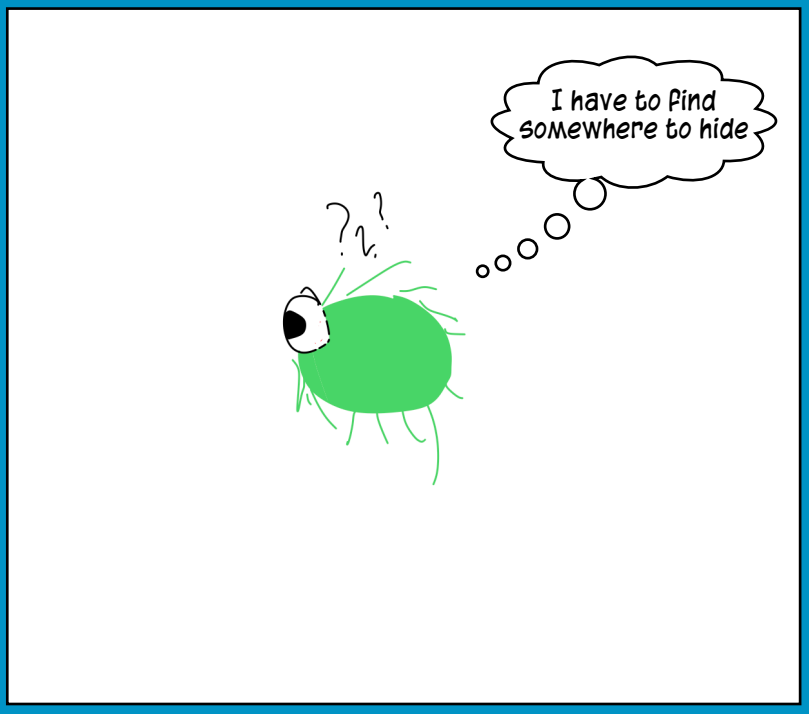
Wow, this place is huge



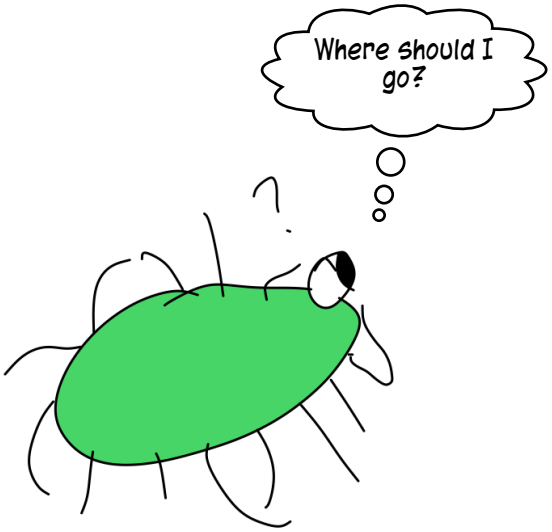
Good idea
Let's get doughnuts
Awesome
Little did he know, he was now being tracked down by the human immune system



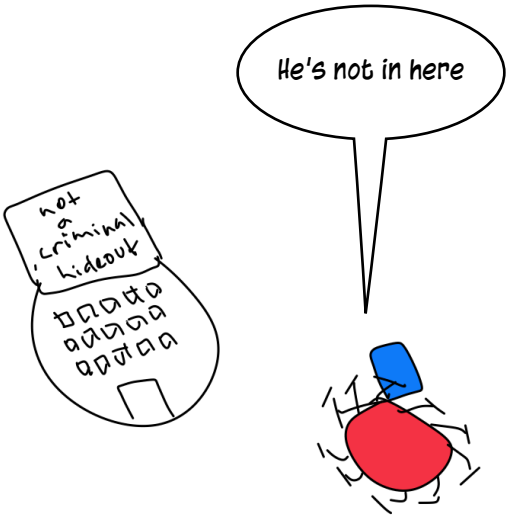
Uh oh...
He soon found out that he was getting followed

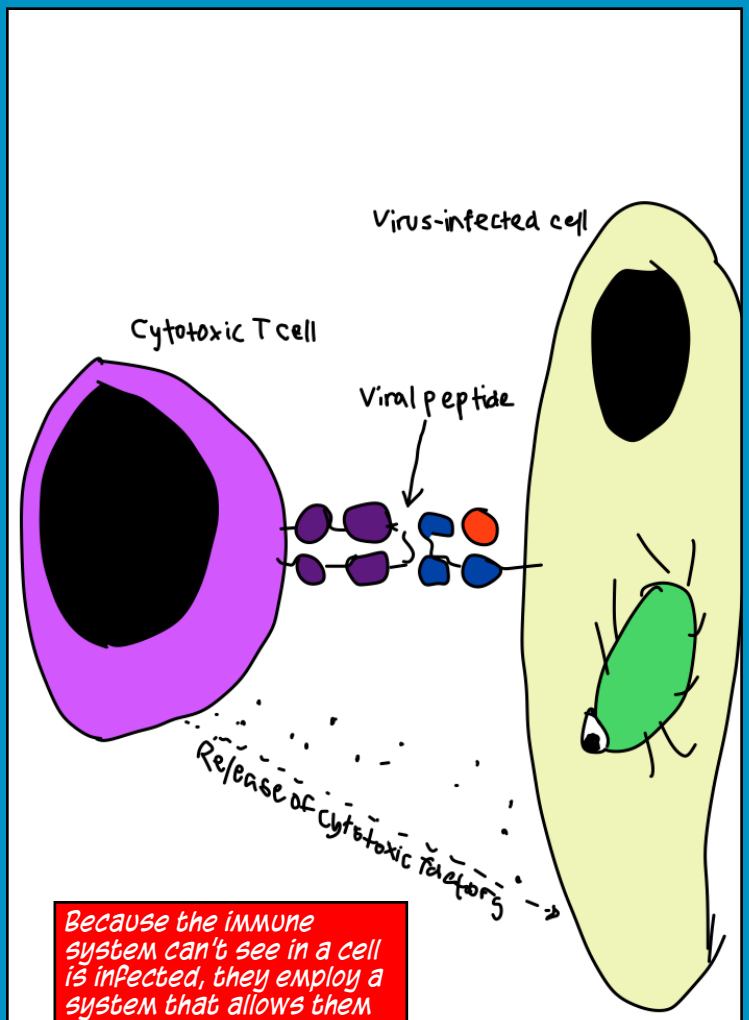


I have to find somewhere to hide

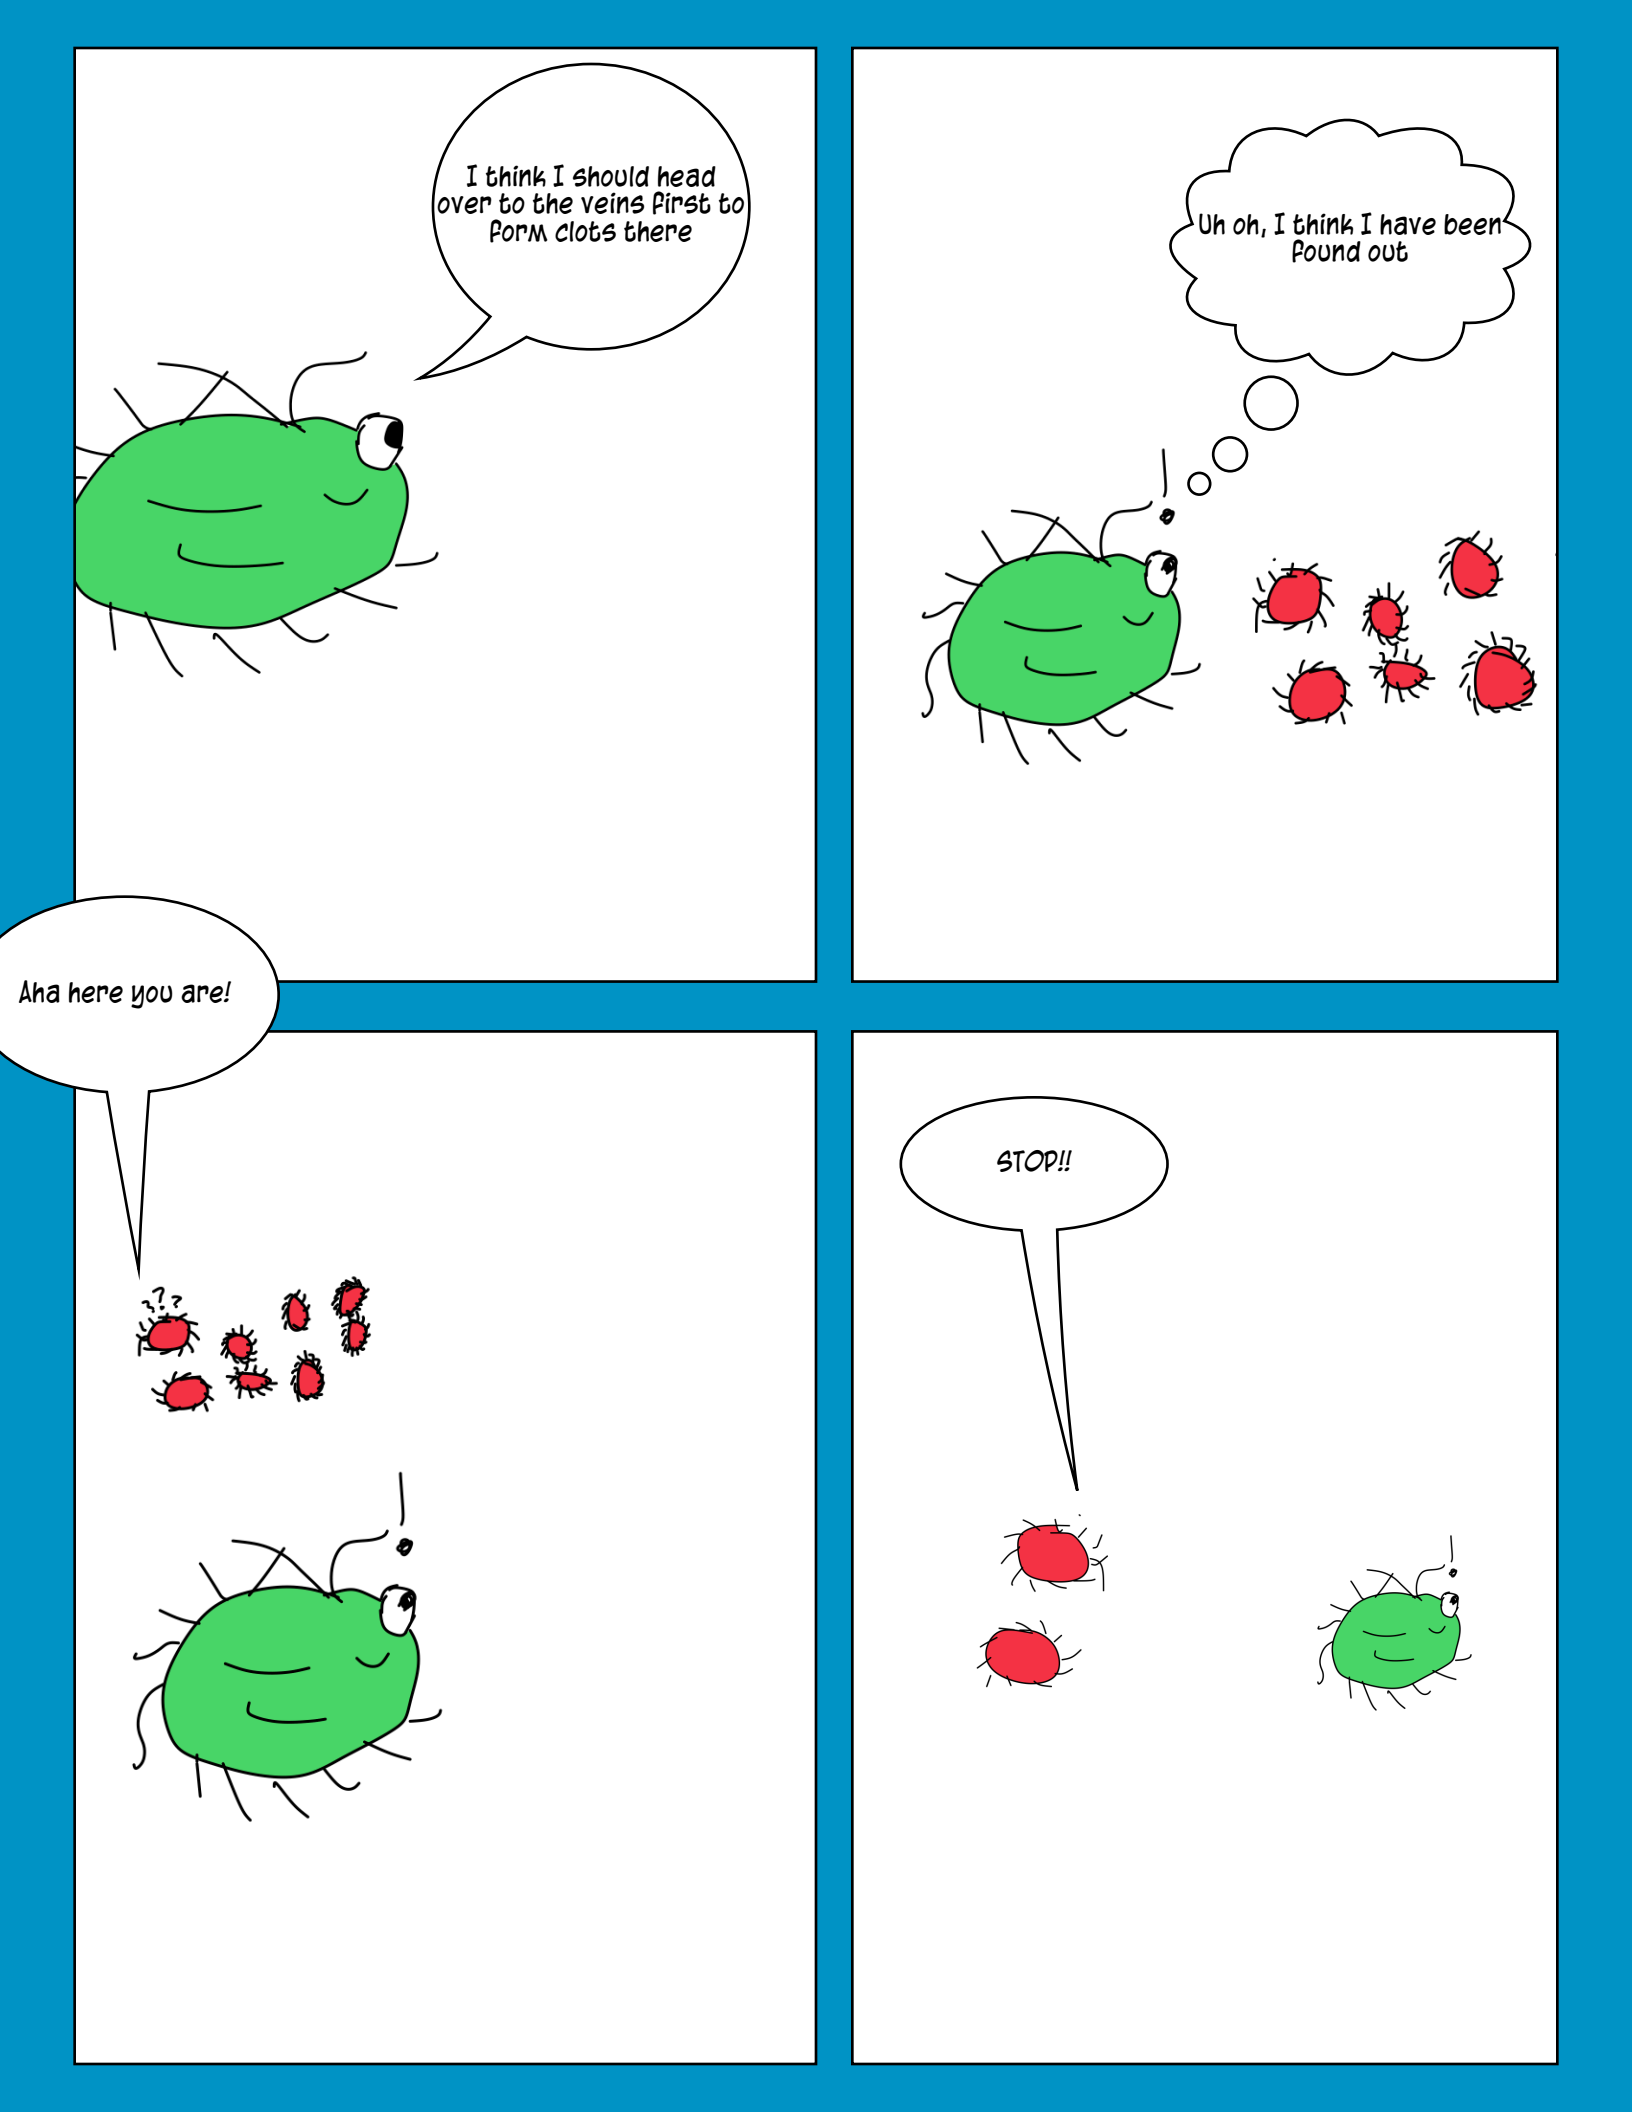


He soon found a place to hide in a cell

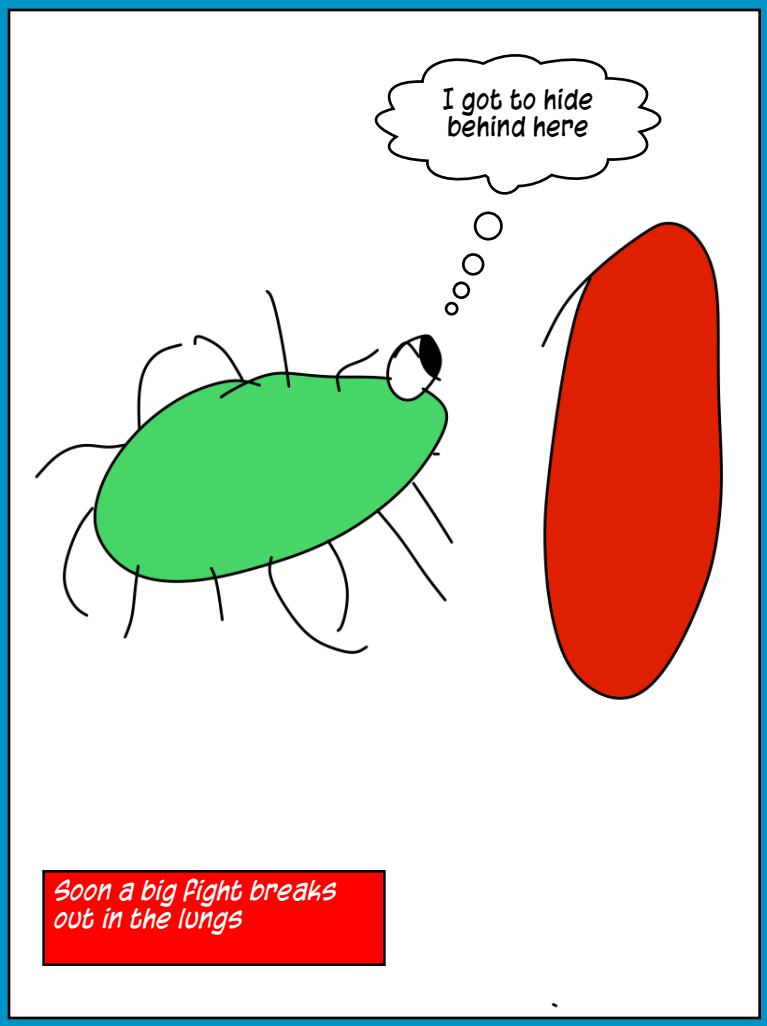




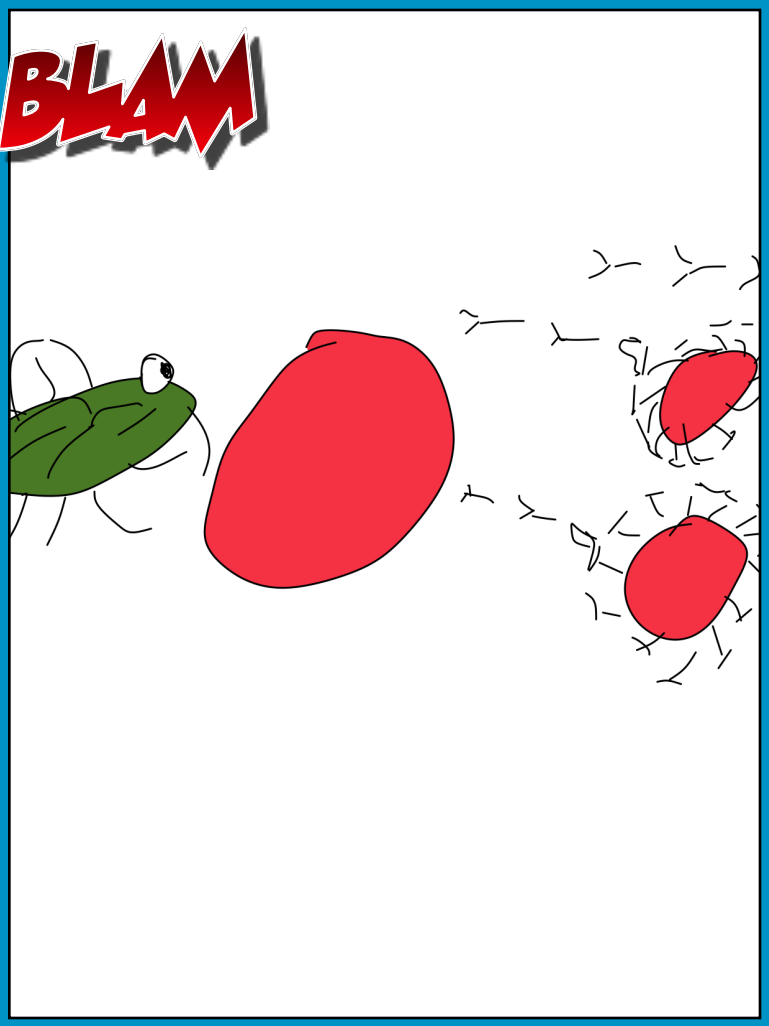
Because the immune system can't see in a cell is infected, they employ a system that allows them to show other cells what is in them



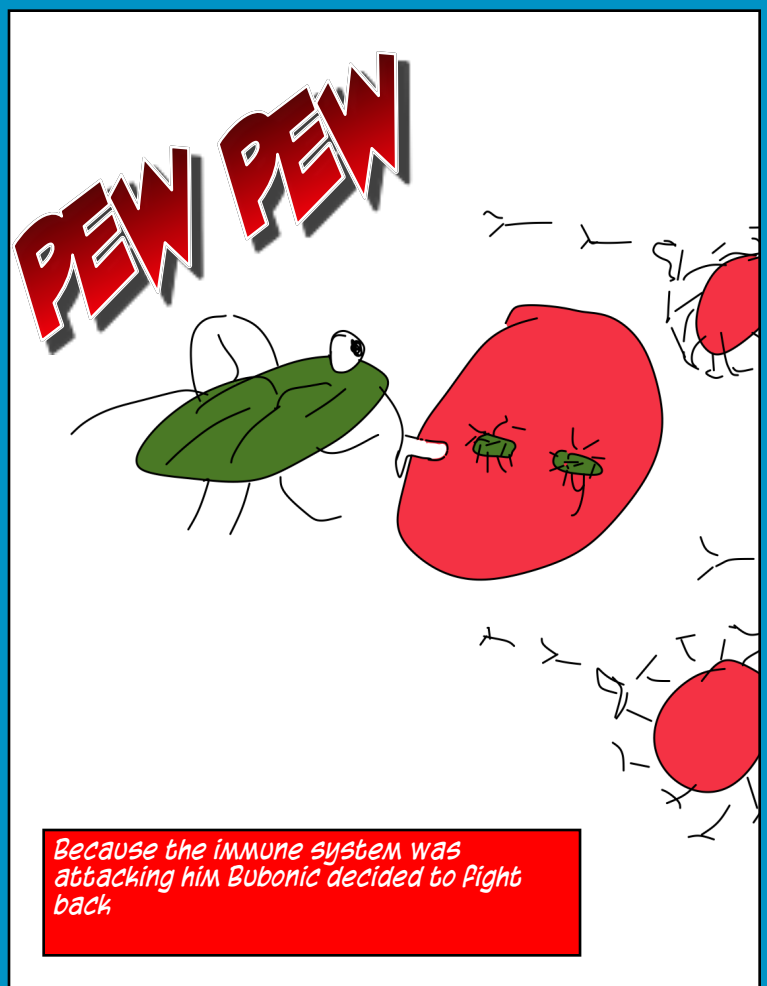
I think I should head over to the veins first to form clots there
Uh oh, I think I have been found out
Aha here you are!
STOP!!



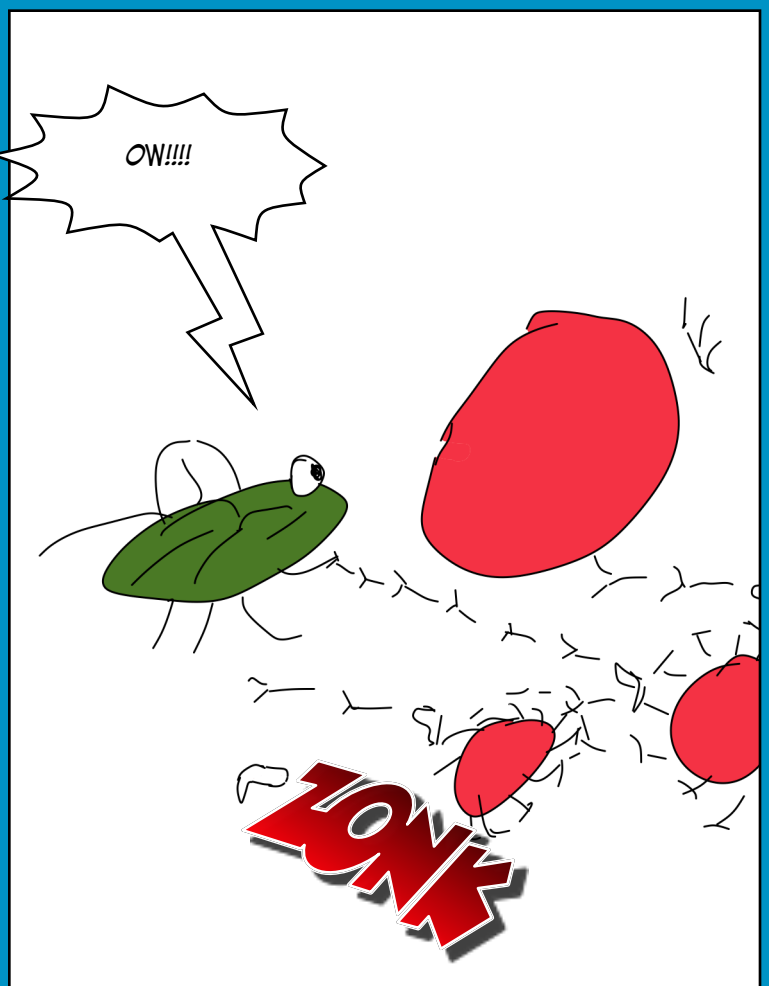
I got to hide behind here
Soon a big fight breaks out in the lungs



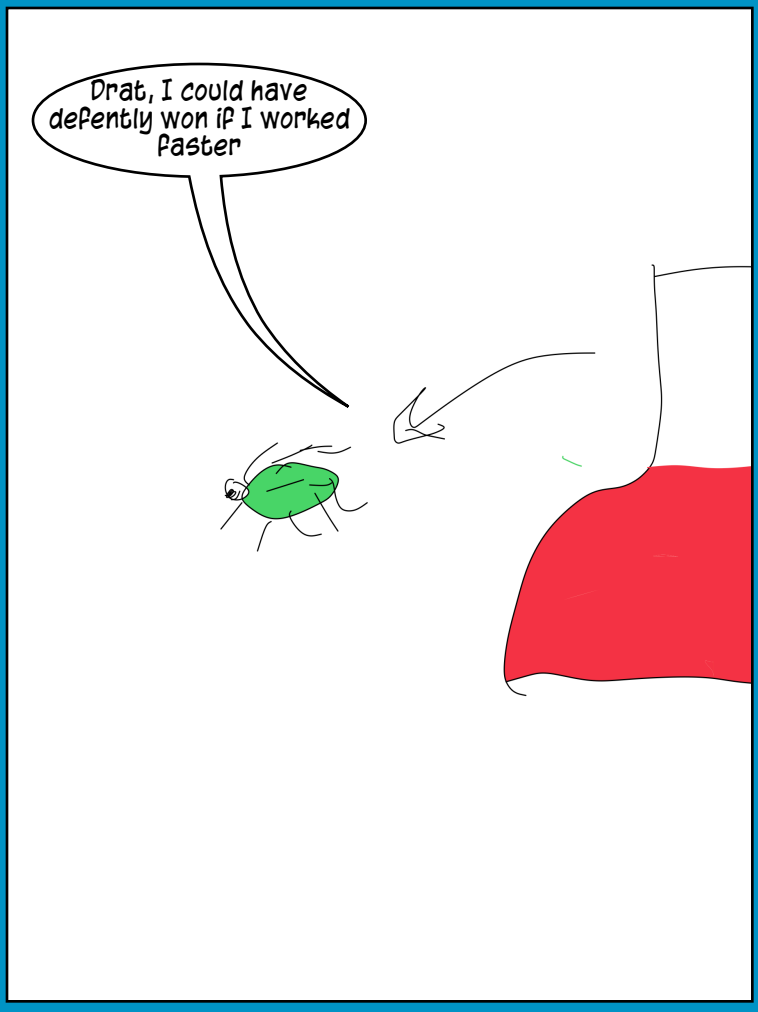
BLAM



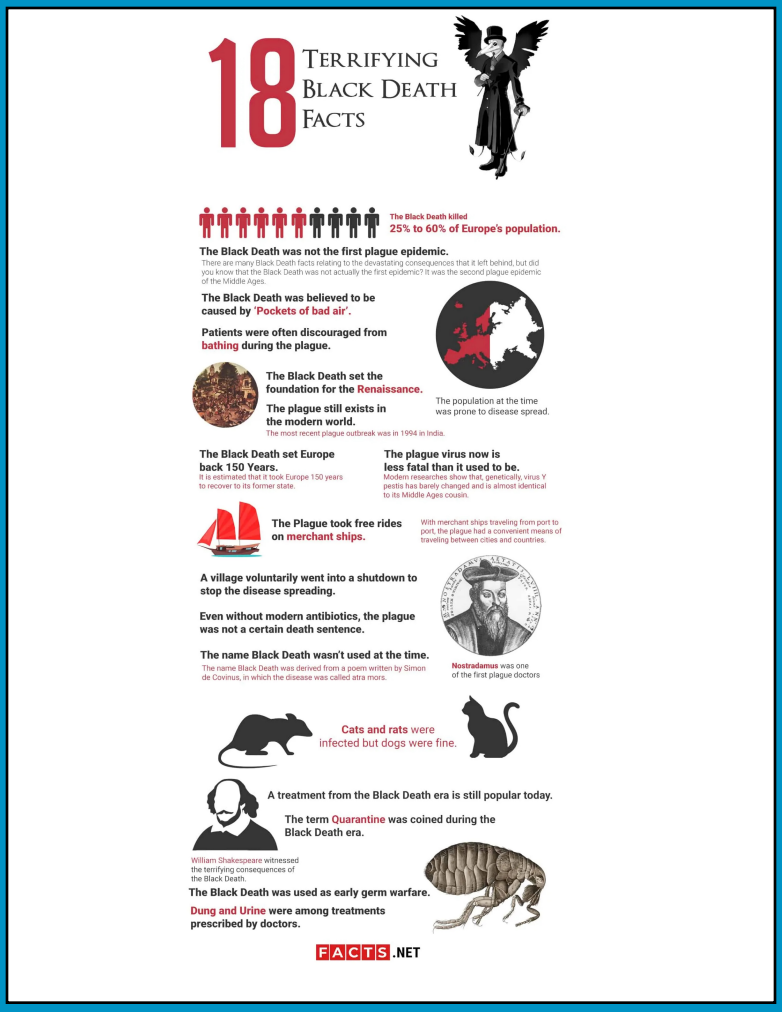
PEW PEW
Because the immune system was attacking him Bubonic decided to fight back



OW!!!!
ZONK



Drat, I could have defently won if I worked faster



18 Terrifying Black Death Facts

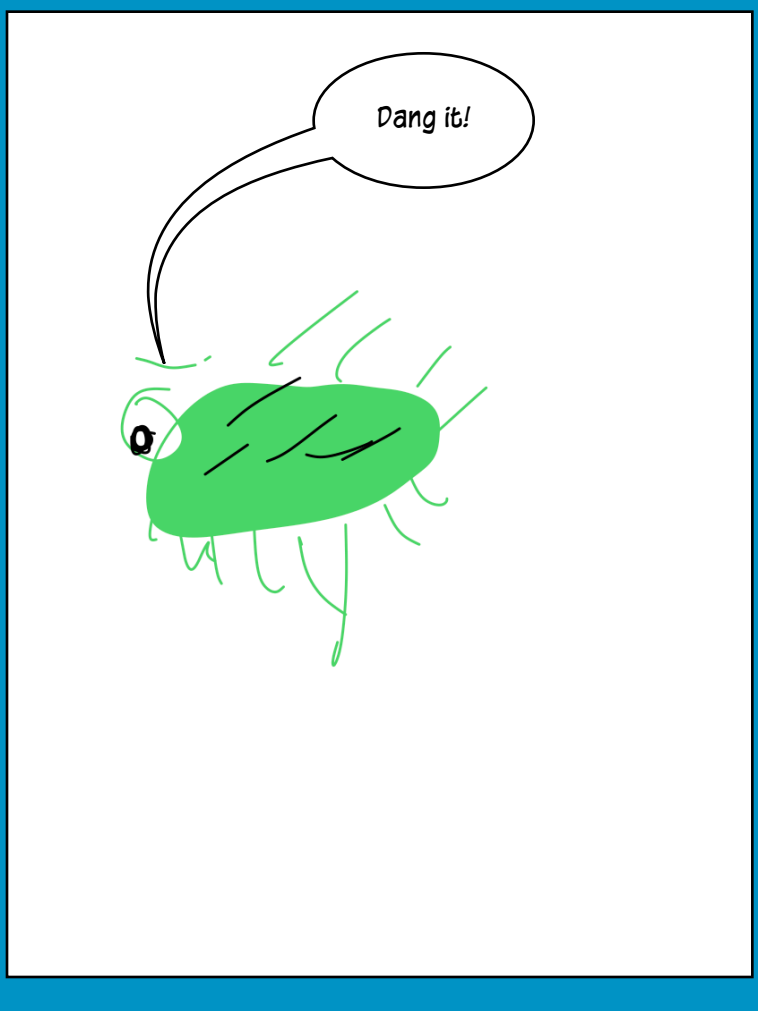
FACTS.NET



Dang it!

Fun fact: the bubonic plague (Black Death) kills 24 hrs after the first symptoms
But, a good thing is that the bubonic plague is not as deadly because our immune system is used to it
The end
