

Hello my name is Milo. I am a licensed astronaut and mechanical engineer. I work for the CSIS (Canadian Security Intelligence Service). I am currently on the moon working on a particularly challenging project regarding a 2.4 trillion dollar company called Tek.

Tek is a Swedish company that designs and manufactures advanced technology including robots, cars, planes, and spaceships. The name comes from the Swedish word teknolgi which means technology. Currently, some countries are suspicious that Tek is stealing software from other companies. Canada was the most available country to investigate as the US was still recovering from the recent mini-war they started.

I am not alone on this mission. I am with another agent named Silas. The group pairing was not a good idea for me as I am a total introvert and much prefer to work alone. We are currently on the moon where the main Tek manufacturing facility is located. It is completely operated by robots and there is not a single human being inside the building. We need to break in, steal some data and then get safely out. We were provided with guns that hold darts that are able to shut the robots systems down temporarily so that nobody knows were even there.

Unfortunately, there are too many guards for us to go in through the front even with the guns. We are both trying our best to use spare parts in order make a device that will allow us to sneak in through the top of the building which we found to be the weak spot of the facility. It has been two weeks since we started and we have nothing. I have decided to try to interact with Silas in order for us to succeed in completing our mission.

I walk over to him and say "Hi! hello! Hi there!" Uh oh. Things aren't going smoothly. I told you I'm bad in social situations. "What are you working on? What's that? What are you doing? Where do you live?" He slowly retreats to his invention. Objective failed.

After a couple hours I have decided to try to talk to him again "Hi," I say, "What are you making?"

"A mini spaceship," he tells me.

"Cool, but we dont have enough materials," I tell him kindly.

"Okay. What are you working on?" He asks.

"Magnet boots that stick to walls," I tell him.

"The walls of the factory aren't magnetic," he tells me.

After some silence I ask "What should we make now?"

His eyes light up "What if we combined our ideas to make...jet boots!"

We get to work immediately, making our first prototype. After a few hours we finish and start work on our next draft. After a few days we have a prototype that we are proud of that is fully functional. We then work on our plan. It turns out Silas is a very creative person and by combining our ideas we come up with a very strong plan. So we strap on our space suits and get ready for the mission.

I go in first through the top and take out some guards. Then I make my way to the control room and let Silas in. He takes out the guards and then proceeds to the computer room. When he gets there he puts in the USB stick and flees. I then shoot all of the gaurds on my way to the room, grab the USB and use my jet boots to get out. Just as I am about to leave, a mega guard finds me and tries to fight me. He is too fast for my gun so he easily grabs me and takes me to the communication room. Before he makes it Silas comes in and using teamwork we power off the robot.

In the end we are successful and are able to expose Tek. The company loses billions and the owner, Oskar Olson goes to jail for copy. We each win medals for our courage and quick thinking, and it is all thanks to our teamwork and collaboration.
